

1. List the main actors who will use the application.

- client/community member
- donor
- employee (includes both paid and volunteer)
- visitor (someone who wants information about community assist)

2. Create Use case diagrams for two of the actors.

3. Choose one use case in each of your diagrams to write up using the following template:

Use case 1

Use Case Name: Apply for loan

Actor: client

Preconditions (if any): client has registered

Starting Condition (State): client logs in

Use Case Steps:

1. client fills application for a loan
2. data verification
 - 2a. all data correct, application accepted

- 2b. unable to verify data, ask client to resubmit missing/ incorrect information
3. application recorded in database
4. client receives notice that application has been received

End Condition (State): client logs out

Use case 2

Use Case Name: view list of donations

Actor: donor

Preconditions (if any): donor has registered and donated at least once

Starting Condition (State): donor logs in

Use Case Steps:

1. donor logs in
2. connection to database established
3. view list of donations

End Condition (State): donor logs out
